Aviation Lighting
Fall Conference
Tucson, Arizona
October 22, 2013

Richard Larivée, ing. P.Eng. Chair RP-37

**IESNA RP-37 - Update**"Recommended Practice for Outdoor Lighting for the Airport Environment"

**IESALC** Recommended Practice Subcommittee

- Purpose
- Scope
- Table of content
- Section by section review and table 4.1
- Comments form
- Front cover picture
- Conclusion

- The purpose of this recommended practice is:
  - Airside Provide for adequately lighted areas where parked aircraft are safely serviced; aircraft crew and passengers safely board and deplane; and cargo operations are conducted;
  - Landside Provide for adequately lighted access roadway and parking areas for safety and security of pedestrians and vehicles;
  - 3. Adjacent Development Provide guidance for lighting in the vicinity of the airport including outside the airport property line. All while taking into account the special needs of the airport environment such as height restrictions and light interfering with air traffic controller and/or pilot vision.

## **Purpose**

- ▶ The scope of this recommended practice covered:
  - Outdoor lighting in the airport environment includes aircraft stands and apron areas, roadways, vehicular parking facilities, passenger loading and unloading areas and pedestrian walkways.
  - The recommendations included in this IESNA RP provide guidance for lighting of these areas while emphasizing the restrictions, regulations, and best practices for safe movement of aircraft.
  - Excluding AGL and heliport areas

### Table of Contents

- Characteristics of Airport Areas
- Visual Issues
- Specific Area Design Criteria
- Essential Safety and Security Lighting
- Environmental Condition and Sustainable Development
- Definition
- Reference
- Annex
  - Maintenance Considerations
  - Economics
  - Lighting Equipment

## **RP-37 Recommended Practice**

#### Aprons

- Aircraft parking stand
- Commercial (air carrier), general aviation, cargo & hangar
- Passenger, baggage, catering, cargo, ramp services, mechanical checks, maintenance and repair, fueling operations

#### Other Airport Facilities

 De-icing/anti-icing facilities (remote, storage and truck loading), fuel facilities, Ground Service Equipment (GSE) areas, engine run-up test area

#### Roadways and pedestrian ways

 Departure, arrival, walkways from parking facilities, surrounding roadways, roadway signage, secure access point

#### Parking

Surface parking lot, top level garage, toll plaza

#### Other exterior lighting

 Laser sensitive area, landscape, façade illumination, signs, flagpole, tunnel, temporary construction lighting, cart entrance/exit, ...

# **Characteristics of Airport Areas**

- Airport control towers
  - Visibility throughout airfield and landside
  - Line of sight (pole and luminaire)
  - Obtrusive light
- Pilot (dynamic movement)
  - Approaching the airport
  - Rollout & Taxiing
  - Parking
- Pedestrian and driver conflict
- Security

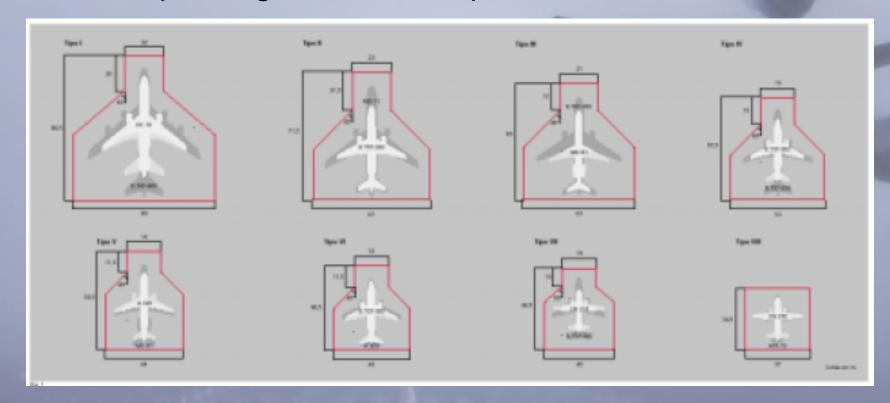

## **Stanstead Airport UK**

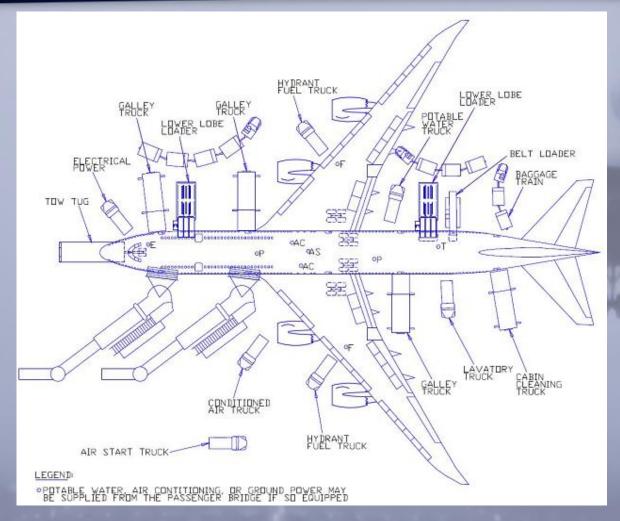

http://www.stopstanstedexpansion.com/documents/SSE\_18a\_Annex2\_Stansted\_Airport\_at\_Night\_View\_1.jpg

## **Environmental Issues**

Aircraft parking stand concept and limitation

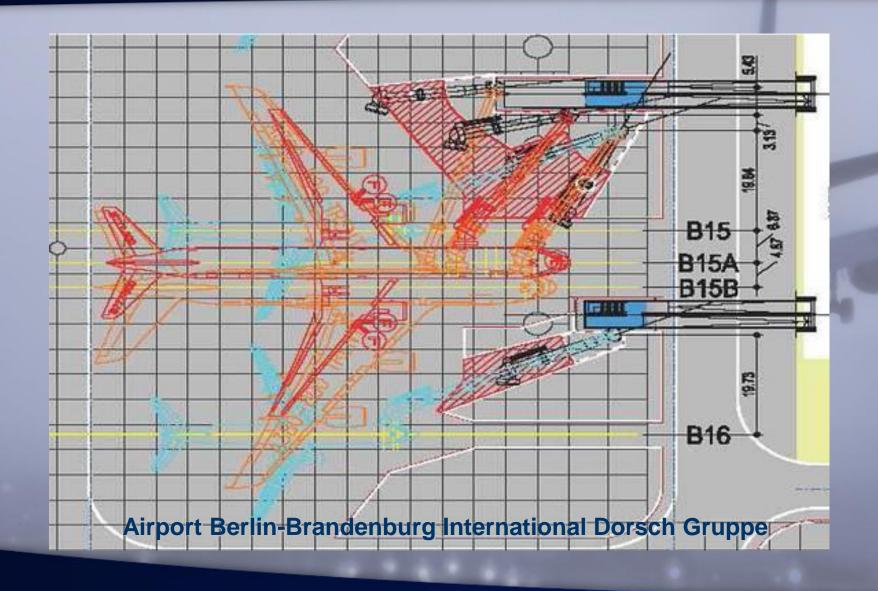

Specific Area Design Criteria – Aircraft parking stand limits

Boeing 747 – Servicing arrangement

# Design concepts – tasks related

Design concepts – Multiple Aircraft Ramp System

- Actual document
  - + 70 pages
  - + 50 images/photos/graphics
- Finish some graphics
- Review editing and coordinate graphics
- Send to IESALC members
- Send to IESNA
- Expecting some comments and review document for publication
- Future: continuous maintenance of the RP, serial of issues to address

# **Action plan**

- Coordination with IES Roadway Lighting Committee (RLC)
  - Awareness session of aviation business and impact on outdoor lighting
  - Text to be included in various RP of IESNA
- Contacts with other Civil Aviation Authorities and ICAO
- Monitoring of what other countries are doing
  - Stay tune for May Yeung presentation later this week

# Work of the subcommitte

- Panel session
  - BETTER LIGHT AND ENERGY SAVINGS
    - Pilots, Airport, R&D, Manufacturers and IDA
- Task assignment to Heather Johnson
  - Specific calculations that RP37 will require
